

Sample document - Dataset-Maker

Synthetic test page. Contents are placeholder text.

1. Observation

Fragments recovered from the archive box were numbered in the order they were lifted, not in reading order. Each was photographed on a neutral background before any attempt at reconstruction. Edge profiles, ruling lines and ink density were logged per fragment so candidate joins can be scored independently of content.

2. Observation

Fragments recovered from the archive box were numbered in the order they were lifted, not in reading order. Each was photographed on a neutral background before any attempt at reconstruction. Edge profiles, ruling lines and ink density were logged per fragment so candidate joins can be scored independently of content.

5. Observation

Fragments recovered from the archive box were numbered in the order they were lifted, not in reading order. Each was photographed on a neutral background before any attempt at reconstruction. Edge profiles, ruling lines and ink density were logged per fragment so candidate joins can be scored independently of content.

Fragment	Width (mm)	Height (mm)	Edge type
F - 01	62	88	torn
F - 02	45	71	torn / cut
F - 03	80	39	torn
F - 04	58	66	folded
F - 05	33	52	torn

Table 1. Fragment dimensions (placeholder values).
